I am writing to voice my concerns over Dominion's proposed solar fees. The proposed fees are excessive and create an unfair burden to those with solar panels. Also, they would effectively kill solar in South Carolina. Thanks to the Energy Freedom Act, South Carolina is on track to lead the southeast in solar production. However, Dominion will end that by making it financially impossible for many to embrace solar. Also, the proposal is not congruent with other SC power companies' solar programs. This is nothing more than an excuse to add to revenue. Claiming that solar needs to pay its fair share ignores the power that solar users produce for Dominion and the many benefits they are providing for the economy and environment by investing in solar. I urge you to reject Dominion's proposed fees.

Sincerely,
Stephanie Frick
Charleston, SC
